

The Design, Operation, and Maintenance of Building Systems, Part I

Required in the   programs

Class Date(s): February 21, 22, and 23, 2008

Class Time: 8:00 am – 5:00 pm (Thursday, Friday, and Saturday-Test on Saturday)

Location: TBD

As a property manager, you are the professional link between the building owner, its occupants, the systems engineers, and various contractors. To be effective, you need to know the ins and outs of building design and construction, including codes, renovation, life-cycle costing, maintenance, and building systems.

Through this course, you will learn to manage the ongoing operation and maintenance of building systems, gaining insight into the many issues that affect building efficiency and cost-effectiveness.

Major topics covered in this course:

- Building Design and Construction
- Structural Systems
- Plumbing Systems
- Building System Controls
- Construction Materials
- Heating, Ventilating, and Air Conditioning
- The Building Envelope
- Roofing

You will take away these key concepts and skills:

- The ability to maintain building systems efficiently and cost-effectively
- A greater familiarity with structural components and building materials
- An understanding of HVAC and plumbing systems
- An overview of how a structure functions
