

# Is Your Facility Following Infection Prevention Best Practices?

## How enhanced cleaning can help protect your building's occupants

Whether you're concerned about flu season, novel viruses like COVID-19, or better year-round infection prevention, implementing and encouraging these best practices can help curb the spread of germs. A skilled cleaning partner like ABM can help you deploy these methods.

### The Three-Tiered Approach

#### 1. People-Based Prevention

Encourage hand hygiene with handwashing signs and by supplying sanitizer stations, when available. Use disinfectant wipes for high touch surfaces.

#### 2. Using enhanced methods and disinfectants

Making the switch from all-purpose cleaners to EPA-registered disinfectants may help curb the spread of pathogens if employed properly.

#### 3. Clean more frequently

An observation of your building's traffic patterns in relation to occupancy levels is key to determining what should be cleaned and how often.

### Remember...

Encourage sick people to **stay home**

**Avoid contact** with sick people

Remember to sneeze and cough into your **elbow or a tissue**

**Wash your hands** often and for at least 20 seconds

**Disinfect** your personal work area often and suggest the same for your occupants

For assistance in employing these methods, call **866.624.1520** and **press 3**.
