AREA DISINFECTING SPRAY SERVICES

FREQUENTLY ASKED QUESTIONS

What kind of spaces can we treat?

- Tenant spaces, Building Common Areas, Restrooms, Elevators, Parking Garages

Where is this product applied:

- This is applied as fogging treatment. It is misted throughout the spaces, coating all surfaces (floors, ceilings, working surfaces, etc.)
- Product data sheets & video of application process available upon request

Does this product leave any residue, or cause any damage to surfaces?

- We tested this product on our own office. After drying, there is not any residue left to the touch. Although, food prep surfaces (breakroom counters, tables, etc.) must be cleaned after treatment. In addition, glass windows are left looking slightly foggy. It would be best to have glass surfaces cleaned by your janitorial service after our application.
- In treating our office, the product was tested on clear finished solid wood, quartz, LVT, carpet, ceiling tile, ceramic tile, glass, and stainless appliances & hardware. None of the surfaces were stained. Before spraying, receptacles, smoke detectors, electronics (monitors, hard drives, copiers, etc.), and artwork will be protected. Any paper products that the client does not want exposed will need to be stowed away.
- The product has a mild fresh linen scent. After the product has settled, there should be little to no scent. If smell is a concern, we can place HEPA filtered air scrubbers once the product has settled.

AREA DISINFECTING SPRAY SERVICES (CONTINUED)

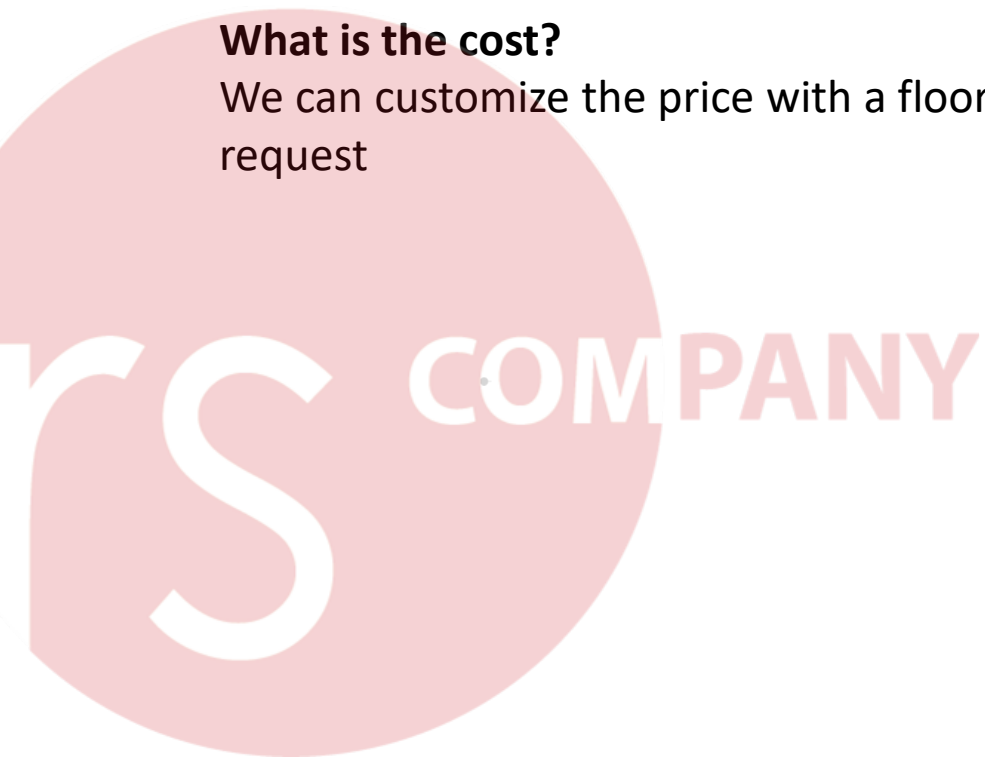

FREQUENTLY ASKED QUESTIONS (CONTINUED)

How long does the work take?

- For example, a 2,000 SF space took 1 hour between protection, spraying, window cleaning & clean up.
- The product needs 10 minutes to dry, and will need to settle for at least four hours before any persons enter the space.

What is the cost?

We can customize the price with a floor plan and notes of items that will need protection. Pricing is available upon request
